Medication Disposal Information:

PRE-TEST:
1. True or False: There are no agencies that are concerned about the disposal of unused medications.

2. True or False: The United States Government strongly recommends to only flush or put in the disposal unused medication?

3. True or False: It is clear that the lack of an effective disposal mechanism for excess pharmaceuticals is contributing to contamination of our drinking water supply and leading to a dangerous increase in nonmedical use of pharmaceuticals by young people.

4. True or False: Veterinary medications are not found in the drinking water as well

POST-TEST:
1. Name the agencies that are looking into proper disposal of unused medications:
   1.
   2.
   3.

2. Can all water treatment methods currently in use remove all pharmaceuticals in water? (per the 1/2009 Pharmaceuticals in drinking water)

3. Discuss the evidence noted that has been seen in the fish, frogs and aquatic species in the wild per U.S. Rep. James Moran 3/3/2009 suggested legislation:

4. What is Australia proposing as the safety factor for the dilution of pharmaceuticals in drinking water?

5. Name the proper disposal method you think is appropriate after evaluation of the articles reviewed?
